Nice homage to Carmageddon, go check it out!. At the moment Clutch is only 2.99 Euro and at this price, buy it. But the normal price of 9.99 Euro is too high in my opinion. The story is simply stupid and it does not help at all that the short story snippets are triggered by particular missions, which you can play without any order. But apart from that, for 2.99 the game offers quite some fun.. Great game, highly recommended!. I really wanted to like this game but there's more issues to it that makes it not worthwhile. Granted it has a few gems to it. I mean come on, who doesn't like fast cars and killing zombies at the same time. The game mechanics are generic but the physics are believable enough. The hud is extremely confusing unless you pay close attention and die so many times in demolition . Demolition mode has some quirks to work out with the A.I. but

otherwise generally decent. Now this is personal gripe so take it with a grain of salt, I like customizing my cars.alot. From moving the decals to upgrading pistons in the engine. This game just gives you paint job with no choice in decals whatsoever. However, you can upgrade yur car's weapons which is decent. It's not. And getting new cars is a challenge in itself considering you have to litteraly beat the everlasting hell out of the other car you want. And even then, there may be the case your car is slow enough to be overtaken by a snail that the other car can leave you in in it's dust blood and zombie infested wake. All in all the game itself had potential, and it could have used some major developing before being turned loose, but the mediocre customization, confusing as hell story, and difficulty of getting something better than that clunker you get at the start almost make this game dead in the water. 4/10 "The Diamond in the Rough zombie driver.". Pretty fun if you're looking for a quick fix of arcade racing/demolition/random zombie slaying. Not an astounding game by any means, and it doesn't bring much new to the table, but it's pretty entertaining if you can get it for pretty cheap.. Works fine on Debian Sid. Brings back memories of Carmageddon.
